

APTUM, LLC

CAPABILITY STATEMENT

Remote, deliverable-based applied AI, data engineering, and workflow automation.
SDVOSB · VOSB · Specialist Subcontractor for AI, Data & Automation Scopes

COMPANY

Aptum, LLC is a Service-Disabled Veteran-Owned Small Business delivering remote, deliverable-based applied AI, data engineering, and workflow automation as a specialist subcontractor. We attach to prime teams for narrow, high-skill technical scopes, not on-site staff augmentation or labor-hour billets.

CORE COMPETENCIES

- Applied AI and agentic workflow automation built on trusted operational data
- **Data engineering**: modern data stack, lakes and warehouses, pipelines, and definitions that hold up
- Reporting spines and decision-guidance layers so leaders know where to look
- Cloud SaaS and custom application development and integration, delivered as fixed-scope builds
- Architecture assessments that produce biddable, deliverable-based work packages for primes

HOW WE ATTACH

- Narrow AI, data, and workflow scopes where a prime needs depth without adding headcount
- Remote CONUS delivery, priced to the outcome and the deliverable rather than the hour
- Solo principal delivery, with an optional contract engineering bench for larger builds
- Fit for DoD, VA, and USSOCOM-adjacent IT and analytics needs through prime teaming

DIFFERENTIATORS

- **Certified SDVOSB / VOSB**: socioeconomic credit paired with real technical delivery
- Commercial speed with gov-aware constraints: clear definitions, fixed scope, remote execution
- **Outcome-first**: start from the metrics that matter, then build the data and workflow spine
- **Not a staffing house**: a specialist sub for AI, data, and automation attach
- **Credentialed**: Palantir American Tech Fellowship for Veterans (2026); OpenAI Select Partner

PAST PERFORMANCE (COMMERCIAL)

- Stood up operational control-tower systems that centralized intake, status, hours and NTE tracking, and leadership dashboards, cutting manual status-chasing
- Replaced spreadsheet and multi-tool patchworks with low-code and automation backbones for reporting and workflow
- Designed external access patterns that preserved control without unnecessary license sprawl
